

Health & Safety

SHExpo

Since its establishment in 1928, RRC INTERNATIONAL reports it has helped millions of individuals all over the world to achieve professional, educational and vocational qualifications. RRC is well established within the HSE training industry and has been attending the SHExpo for the last 15 years. This year on stand SH1660 it will have Gary, Kevin, Nick and Emma to assist with any training or consultancy needs. The company says visitors can look forward to a prize draw for a chance of winning a £1,000 training voucher every day of the Expo. There is an additional £1,000 voucher to be won, for those who sign up to the virtual expo on the RRC website. Runners up can also win RRC Law guides. RRC will also be offering a show discount of 20% off all of its classroom and online courses, and textbooks until 31st July 2019. New for 2019 it has two brand new courses being launched at the show, including the NEBOSH HSE Introduction to Incident Investigation course. RRC says it is one of the first course providers to deliver the course, and it has proven very popular. RRC will also be launching the IOSH Managing Occupational Health and Well-Being course which has an emphasis on Well-Being within HSE Work environments. [w| www.rrc.co.uk](http://www.rrc.co.uk)

No compromise safety glasses

BOLLÉ SAFETY reports it continues to innovate with the new SILEX. The company says without compromise, these safety glasses are extremely comfortable, perform at every level, are very stylish and offer exceptional value and due to its patented 160° Flex Technology, the SILEX fits every size and shape face perfectly due to its exceptional design which gives absolute support without any pressure points, allowing the wearer to be secure all day long. Available in clear and a smoke outdoor version, both come with colourful bi-material thin sports temples and a permanent double sided anti-fog and anti-scratch lens coating. The company says the glasses meet the highest European standard EN166/170 1FT and this wraparound model is suitable for everyone with an excellent quality to price ratio.

New modular operating mode

PILZ has announced it is launching the PITmode fusion, a modular operating mode selection and access permission system and says being modular, the system offers machine builders and system integrators greater flexibility when implementing safety and security on equipment and processes. The new PITmode fusion consists of the PITreader reader unit with RFID technology and integrated web server, and an SEU (Safe Evaluation Unit). Its modular design enables the PITmode fusion to be integrated individually into the design of existing control consoles. Existing pushbuttons can be used, enabling better operation for the user. PITmode devices are used on plant and machinery in which users switch between different control sequences and operating modes. Authorised users have a coded RFID transponder key that provides them with the necessary access rights. **t| 01536 460766** **e| sales@pilz.co.uk**

Portable chemical dosing

WES says continuous product improvement has led to the launch of DosingCube E, the latest iteration of its distinctive and highly flexible portable dosing system. The company says these compact, fully enclosed, bunded units have already proved themselves in hundreds of situations, and now offer even better performance. Designed primarily for rapid plug-and-play deployment in emergencies, or for planned temporary use, they can be quickly installed to dose chemicals from IBCs and other existing storage vessels. They will also serve as an interchangeable modular solution for permanent dosing setups. Easy to carry and attach, DosingCube E is protected by an IP54-rated polyethylene enclosure which is weatherproof, chemical-resistant and secure. It features a clear inspection window, as well as a secondary spray shield to safeguard the operator when opening the unit. [w| www.wes.ltd.uk](http://www.wes.ltd.uk)

Noise exposure reporting

CASELLA, air sampling, noise and vibration specialist, has announced it has launched an advanced and reliable software package for its personal dosimeter (the dBadge2), NoiseSafe. The company says when used alongside Casella's dBadge2, it is the ideal tool for fast and efficient reporting and analysis of noise exposure levels. Casella says its NoiseSafe software saves the user time with its instantaneous reporting on an employee's noise exposure levels. Linked to the dBadge2, the software downloads a typical eight-hour workplace recording in just a few seconds. Audio and motion can be analysed to determine if any of the data is erroneous, which can be quickly and easily removed from exposure data, giving confidence in the results. #StandUpForHealth eBook

COBA EUROPE has published a new updated version of its eBook - #StandUpForHealth available as a free download from its website. COBA says compiled by its team of safety matting experts, the revised 2019 version includes the very latest research and information about work-related musculoskeletal disorders (MSDs) presented in a visual, reader-friendly format. It also includes the results of COBA's most recent 'Standing at Work Survey' and the effects standing-related ailments have had on absenteeism and productivity across a variety of workplace sectors.

Also new in #StandUpForHealth 2019, is an informative 'Expert Opinion' from Krishna Gohill on behalf of The College of Podiatry. Krishna is a Specialist Podiatrist with a BSc (Hons) in Podiatry.
