

# EXHIBITORS

## RRC International

### Stand: SH1660

Since its establishment in 1928, RRC International has helped millions of individuals all over the world achieve professional, educational and vocational qualifications. RRC are well established within the HSE training industry and have been attending the SHExpo for the last 15 years. This year on stand SH1660 Gary, Kevin, Nick and Emma will be on hand to assist with any training or consultancy needs.

Visitors can look forward to a prize draw for with the chance of winning a £1,000 training voucher every day of the Expo. There is an additional £1,000 voucher to be won, for those who sign up to the virtual expo on the RRC website. Runners up can win RRC Law guides which are a great resource for students and practitioners across the industry. RRC will also be offering a show discount of 20% off all classroom and online courses, and textbooks until 31 July 2019.

New for 2019, two brand-new courses are being launched at the show, including the NEBOSH HSE Introduction to Incident Investigation course, which is a collaborative effort between HSE and NEBOSH. RRC is one of the first course providers to deliver the course, and it has proven very popular. RRC will also be

launching the IOSH Managing Occupational Health and wellbeing course which has an emphasis on wellbeing within HSE Work environments. And visitors will be able to see some projects in development including our new IEMA Online Environmental courses.

For those who can't make it to the show — roving reporter Michelle will be making regular updates on all RRC social media platforms and the RRC International website will have a dedicated section where you can sign up, access some free show giveaways and enter the competition.

RRC's Managing Director Gary Fallaize commented: "The SHExpo at the ExCeL is one of the highlights of the health & safety calendar year, and we thoroughly enjoy engaging with our students and customers face to face. We have some great special offers available this year, as well as the launch of two new courses."

## SiteZone Safety

### Stand: SH2478

SiteZone Safety will be showcasing its portfolio of radio frequency identification (RFID) proximity warning systems at Safety and Health Expo 2019.

The team, led by SiteZone Safety co-founder and director Gary Escott, will also be presenting a new and exciting product called Smart Bubble. It incorporates a variety of features to enhance and optimise the performance of different SiteZone proximity warning systems using smart technology.

Gary Escott said: "SiteZone and its associated products have developed from strength to strength. Its adaptability as a system means that even more workers in different sectors are being protected. And now with the launch of Smart Bubble, that protection is more targeted and 'intelligent' than ever before, to help reduce the risk margins and keep workers safer. We are excited to share it with everyone at the show."

SiteZone Safety's stand will also feature the SiteZone proximity warning system. SiteZone uses Radio Frequency Identification Technology (RFID) technology to warn pedestrians and drivers of each other's presence. Using vibration as well as audio and visual alerts,

SiteZone lets the driver know when a pedestrian is close to the vehicle and warns the pedestrian that their safety is compromised.

Also, on show will be SiteZone variants:

- SiteZone has evolved into smart variants including the UK's first wireless proximity warning system, SiteZone iNstant, for easy and quick installation without cables.
- There's a SiteZone option specially designed for use on extendable parts of plant machinery called BucketZone.
- OverSite is a telematics option for SiteZone and represents the biggest development since the product was originally introduced. It collects essential data from SiteZone in the event of a zone breach and saves to the Cloud to help managers monitor and improve site safety.
- Dumper Advance is a SiteZone variant specifically designed to prevent collisions between forward tipping dumpers and site workers by creating a larger detection zone at the front of the vehicle which is the highest collision risk area on dumpers.
- Smart Bubble – making a variety of SiteZone products even smarter than before.
