

## NEBOSH and HSE's new qualification

Industry experts have hailed the arrival of a new qualification that sets out not only the “why” but also the “how” of incident investigation.

The NEBOSH HSE Introduction to Incident Investigation supports learners and their organisations to end the cycle of incident-and-repeat by carrying out effective investigations and acting on the findings.

This new one day qualification emphasises that investigations should focus on learning rather than blame. It's designed to support individuals tasked with carrying out non-complex investigations and will give learners the skills they need to conduct an investigation unaided, and then produce and implement an action plan to help prevent a recurrence, or a more serious incident.

## SGS to showcase services at Expo

SGS, a leading inspection, verification, testing and certification organisation, has announced that it will be present at Safety & Health Expo, which takes place on 18-20 June at ExCeL, London. At what is now one of Europe's largest health and safety events, on Stand SH2082 experts from SGS will be available to discuss how its services can help companies become more efficient, sustainable and productive.

The main focus for SGS at Safety & Health Expo will be occupational mental health and wellbeing. Visitors will also be able to find out more about a new portfolio of courses that the SGS Academy has developed in conjunction with Cognoscenti Business Psychologists, the leader in business psychology based services.

## Expo is key event for SoloProtect

International lone worker company SoloProtect will be on hand to showcase a variety of personal safety device options to visitors at this year's Safety & Health Expo at London's ExCel.

As well as discussing the merits of their BS 8484 and EN 50518 accredited lone worker solution, the company will also discuss its first Body Worn Video enabled, personal safety device, the SoloProtect ID Pro – which is now in the final stages of product development and is expected to be available for deployment later this year. Staff will also be on hand to demonstrate device functionality, as well as showcasing the company's customer portal, SoloProtect Insights.

SoloProtect will be co-located on Stand SH3890 with leading personal safety charity Suzy Lamplugh Trust, which will be promoting its range of training and consultancy services.

## Helmet with integrated eye protection

The New EVO VISTA Helmet from JSP is an innovative next generation, feature-rich helmet which incorporates a fully retractable optical class1 faceshield or overspec within the helmet.

JSP's R&D team was inspired by feedback received from people who regularly have to wear head protection alongside eye protection. A common theme was not only compatibility, but also the amount of eyewear lost or damaged. The fully adjustable pivot arms in the EVO VISTA Helmet allows the lens and shield to be deployed outwards and over prescription spectacles, unlike similar systems that require helmet adjustment to fit.

## NEBOSH environment course in Dubai

To meet the rapidly growing demand for high level Environmental Management training in the Middle East; RRC is now offering the

NEBOSH International Diploma in Environmental Management course, as a classroom course within its Dubai schedule.

The NEBOSH Diploma in International Environmental Management is a highly esteemed qualification for environmental practitioners and safety professionals looking to expand their knowledge and competence. The course provides specialist knowledge on environmental management systems and key environmental topics such as: sustainability, energy use and waste management.

This three week course commences in September, with a four-week gap between each of the teaching sessions, enabling students to reinforce their learning actively in their workplaces.

## World's first totally hi-vis safety boot

Brightboot, the world's first 360° high visibility waterproof safety boot and compliant to EN ISO 20345, is innovative, combining safety footwear protection with 360° high visibility in low light, daylight and at night, as well as in adverse weather conditions.

Brightboot boots are hugely comfortable underfoot and very light to wear. Shock absorption is significant compared to other brands of safety boots, supporting natural posture and spinal alignment, reducing wear and tear on the lumbar vertebrae, and reducing wearer fatigue in safety boots.

The high visibility waterproof safety boot is available in three different sizes: tall, mid and low, and three colours: orange, yellow and pink. They are 100% waterproof and metal free. Come and see for yourself on stand SH2446 at the Safety & Health Expo.
